Opis produktu

CNC-machined 6-cell chassis of 3.5mm ultra-thick, premium-grade graphite material, specially designed and optimized for foam-tire racing. Fits XRAY T2'008.

The extra-thick, extra-stiff chassis features milled pockets that allow the bulkheads and other components to be mounted very low... in fact, level with the standard 2.5mm chassis. The extra-thick the chassis gives the car ultra-stiff torsion and flex that are so essential for high-competition foam-tire racing.

Knowing that every small detail impacts the handling and performance of a high-performance car, XRAY CNC-machines every chassis in-house using the most modern German milling machines... fully robotically operated and controlled to ensure that every chassis meets the tightest manufacturing tolerances.
