### Opis produktu

**Aluminum T4'19 chassis with special cutout openings for increased flex. This chassis is recommended for low-to-medium traction tracks as it generates more traction. (Not recommended for high- and very-high traction conditions where either the #301149 or #301150 chassis work better).**

**The front brace - which can be easily installed on the chassis with two screws - eliminates side flex at the front of the chassis, improving steering response and making the car more predictable.**

**Successfully raced by the factory team, and used by Bruno Coelho to win the World Champion title, this is a "must have" for every serious racer.**
