Opis produktu

Reinforced and strengthened alu rear lower suspension holder for the REAR of the rear suspension. CNC-machined from 5mm premium Swiss 7075 T6. Ultra-strong construction provides very long lifespan and durability in even the most extreme racing conditions. Narrower design increases car's rear roll and generates more traction.

Aluminum lower suspension holders with Integrated Suspension Settings™ (I.S.S.™) allow for quick & easy suspension geometry setting changes. This concept was first introduced by XRAY in the very first XB8, and has been carried over to the 1/10 scale XT2.

Using eccentric suspension bushings inserted into aluminum suspension blocks, along with additional suspension shims, the XT2 suspension geometry is completely adjustable.
