Opis produktu

Molded lightweight front LOWER suspension arm made from specially-formulated graphite composite material.

The graphite material works very well in dusty conditions to ensure maximum possible free movement of suspension parts even if a lot of dust accumulates.

The exclusive composite mixture used for suspension arms gives a perfect balance between reliability and performance; the suspension arm is rigid enough for a responsive feel and extreme durability.

Suitable for medium to very-high traction tracks.

Universal design allows the arm to be used on both left & right sides.
