Opis produktu

CNC-machined X12'19 chassis made from 2.5mm high-grade graphite material with a specially-designed compound for low-, medium-, and high-traction tracks. The graphite material is softer than aluminum, allowing the chassis to generate more traction.

The updated chassis design, with grooves for the battery backstop, allows battery position adjustment in the most frequently-used cross--chassis position.

The shorter chassis design, complemented with elevated graphite bumper holder, prevents chassis from touching the track surface at the front, allows for increased steering and more consistent handling - particularly in high-traction conditions - which results in increased off-power steering.
