Opis produktu

CNC-machined from Swiss 7075 T6 aluminum, this X12`20 chassis contains special cutout openings for increased flex. This chassis is recommended for and works extremely well on medium and high-traction tracks; not recommended for very-high traction conditions, where the #371114 Alu Chassis works better. This alu flex chassis generates more traction and gives improved steering. Used successfully by Team XRAY at numerous races, this chassis is a "must have" for every serious racer.

The chassis was redesigned with a significantly narrower shape that ensures the chassis will not have drag in high speed corners which increases steering response and increases high-speed steering.

The chassis includes updated design of the grooves for the graphite battery backstop which allows more secure battery mounting and adjustment in the most frequently-used cross-chassis position. The updated design of the chassis also accommodates the new side link mounting system.
